

Kitchen & Tap

Current Development Checklist & Roadmap

Current Focus

The calculators are already built and functioning. The next priority is turning the project into a polished and professional hospitality website that feels ready for public beta testing.

Immediate Priority Order

1. Fix and redesign app/page.tsx
2. Add About section
3. Add Disclaimer section
4. Improve calculator selector UI
5. Clean calculator styling
6. Upgrade Food Calculator into recipe builder
7. Build Pantry system
8. Connect Food Calculator to Pantry
9. Deploy public beta

Homepage Improvements

- Redesign homepage layout
- Add professional hero section
- Add navigation area
- Add Home, About, Disclaimer, and Calculators sections
- Improve mobile responsiveness
- Add footer branding
- Add veteran-owned messaging

About Section

Add an About section explaining:

- Kitchen & Tap is veteran-owned
- Built for bars, restaurants, clubs, and hospitality operators
- Designed to simplify menu pricing and profitability
- Focused on approachable operational tools

Disclaimer Section

Add a disclaimer stating:

- Results are estimates only
- Users are responsible for accurate data entry
- Supplier costs, taxes, waste, and portions may vary
- Kitchen & Tap is not responsible for inaccurate business decisions caused by incorrect data entry

Food Calculator Upgrade

The Food Calculator should evolve from a simple batch calculator into a recipe-building system.

Planned features:

- Recipe name field
- Ingredient rows
- Add ingredient button
- Remove ingredient button
- Quantity and unit inputs
- Automatic recipe cost calculations
- Portion costing

- Tax and rounding support

Pantry System

Pantry will act as the kitchen inventory and ingredient database.

Pantry features:

- Ingredient database
- Bulk pricing storage
- Quantity tracking
- Desired inventory vs current inventory
- Low-stock indicators
- Ingredient search system

Food Calculator + Pantry Integration

The Food Calculator and Pantry should work together automatically.

Workflow:

- User adds ingredient in Food Calculator
- App checks Pantry database
- If ingredient exists, Pantry pricing is used
- If ingredient does not exist, Pantry item is automatically created
- Updating Pantry pricing automatically updates recipe costs

Bar Back Planning

Bar Back will become the beverage management section.

Planned features:

- Saved liquor items
- Saved keg items
- Saved wine items
- Beverage search tools
- Pricing updates
- Margin reports
- Printable beverage menus

Important Reminder

Do not build advanced systems yet.

Avoid:

- Payroll systems
- Scheduling systems
- POS replacement
- Employee management
- Accounting systems

Keep Kitchen & Tap focused on:

Costing, pricing, inventory, and profitability.
